cells is now based on identification of a nucleotide sequence in the L1 region of the genome. Identification of 6, E7 and L1 make it possible to identify the presence of HPV virus in every stage of infection and to distinguish between virus strains having having middle/high hazard. This is the primer used to identify the E6 region of the low hazard HPV strains in infected cells, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a novel method of identifying viral DNA of human papillomavirus (HFV) in cellular material collected from an individual. The method comprises extracting DNA from the cellular material, amplifying the DNA by using a polymerase, and identifying sequences complementary to sequences in the regions E (early genes) e.g. E6 and E7 of the mountain process of the free contracts of the complementary to sequences in the regions E (early genes) e.g. E6 and E7 of the mountain process of the contracts of the contract of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying viral DNA of human papilloma virus in cellular material collected from an individual, by using polymerase and identifying sequences complementary to regions E of the viral genome using a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The patent is for a rapid in situ hybridisation assay for detecting and typing human papilloma virus (HPV) in non-frozen cellular smears fixed t a support in absence of aldehyde-based crosslinking reagents. The assay comprises: (1) combining nucleic acid in the sample with at least one detectable probe able to hybridise with 1 or more HPV types; and (2) detecting presence or absence of hybrid complexes. Opt. several probes are used, eg one for HPV types 6 and 11, associated with benign warts, and one for types 16, 18, 31, 33 and 35, associated with cervical cancer. The assay can differentiate between HPV types. It is esp. used as a secondary test. The probes can be synthesised or cloned.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     papillomavirus 6b (HPV6b). It was obtd. by Separace reading amplification of the E6, E4 and E5a genes (see also AAT59412-17) of HCV6b and their cloning into vector pSP70. The resulting E6/E5a/E4 cassette was incorporated into pGEX-STOP to allow prodn. of the HPV6b polyprotein in E. coli. The E6/E5a/E4 DNA construct, or the encoded polypeptide, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating genital warts and cervical cancer.
                     DNA construct CSL760 (AAT59431) codes for an E6/E7/E4 polyprotein (AAW01809) of human papillomavirus 6b (HPV6b), plus a C-terminal hexahistidine tag. It was obtd. by separate PCR amplification of the E6, E4 and E7 genes (see also AAT59412-15 and AAT59418-19) of HCV6b and their cloning into vector pSP70. The resulting E6/E7/E4 cassette was incorporated into pGEX-STOP to allow prodn. of the HPV6b polyprotein in E. coli. The E6/E7/E4 DNA construct, or the encoded polypeptide, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating genital warts and cervical cancer.

                                                                                                                                                                                                                                                                                                                      DNA construct CSL673 (AAT59432) codes for an E6/E7/E5a/E4 polyprotein (AAW01810) of human papillomavirus 6b (HFV6b), plus a C-terminal hexahistidine tag. It was obtd. by separate PCR amplification of the E6, E4, E5a and E7 genes (see also AAT59411-19 of HCV6b and their cloning into vector pSP70. The resulting E6/E7/E5a/E4 cassette was incorporated into pGEX-STOP to allow prodn. of the HPV6b polyprotein in E. coli. The E6/E7/E5a/E4 DNA construct, or the encoded polypeptide, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating and the latter of the product of the polyprotein to the polypose of the product of the polyprotein and the continuous product to generate a succine to succine to generate a succine to succine to succine to succine to succine s

A DNA construct (AAT59450) in vector pTrcHisA codes for an E2/E4/E5a/E5b/E6/E7/E1 polyprotein (AAW01816) of human papillomaviru 6 (HPV6); plus an N-terminal hexahistidine tag. It was obtd. by amplification of the individual early genes (see also AAT59436-49) and their cloning into pTrcHisA. The DNA construct, or the encoded polyprotein, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating genital
                                                                                                                                                                                                                                                                                                                                                                                                 mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                   mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SSSSS
                                                   The invention relates to a method for detecting the presence of a human CC papillomavirus (HPV) subtype in a nucleic acid containing sample. The CC method comprises amplifying the nucleic acid in the presence of a CC polymerase and a plurality of oligonucleotide sets, allowing digestion of CC each fluorescent probe during amplification to dissociate the fluorophore from the quencher molecule, detecting a change of fluorescence upon CC dissociation, and determining if the sample is positive for the HPV CC subtype if a change of fluorescence is detected in at least two emission CC maxima. Each oligonucleotide set mentioned above consists of a forward CC discriminatory PCR primer hybridising to a first location of an HPV CC subtype, a reverse discriminatory PCR primer hybridising to a second CC clocation of the HPV subtype downstream of the first location, and a CC fluorescent probe labelled with a quencher molecule and a fluorophore which emits energy at a unique emission maxima, the probe hybridising to CC a location of the HPV subtype between the first and the second locations, where each oligonucleotide set specifically hybridises to a different HPV capple of the present invention is useful in PCR-based assays for detecting HPV subtypes in clinical samples. This sequence represents a PCR primer used contained the function of the tecting HPV capped and the contained contained to the course of nucleic acid amplification. The method counters of the course of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 10

Sequences AAS2991-AAS30164 represent genomic DNA molecules, which encode CC the lung antigen polypeptides of the invention. Lung antigen polypeptides CC and their associated polynucleotides are useful in the diagnosis, CC treatment and prevention of various types of disorders in e.g. humans, CC mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A CC pathological condition can be determined by detecting the presence or a mutation in a lung antigen polynucleotide. The treatable CC disorders include autoimmune diseases such as rheumatoid arthritis, CC hyperproliferative disorders such as nervous system disorders such as cerebral ischaemia, nervous system disorders such as CC cardiovascular disorders such as cerebral infection, endocrine disorders such as CC conh's disease, infections caused by bacteria, viruses and fungi, CC coular disorders such as corneal infection, endocrine disorders such as CC crohn's disease, renal disorders such as glomerulonephritis and CC crohn's disease, renal disorders such as glomerulonephritis and CC crohn's disease, renal disorders such as glomerulonephritis and CC consistency disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, CC to maintain organs before transplantation, to regenerate tissues and in CC chemotaxis. The polypeptides can also be used as a food additive or CC preservative to increase or decrease storage capabilities.

CC Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO or at fire vino intrombrable and retrease.
                                                                              Query Match

The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy.

AAS28161-AAS28764 represent genomic sequences encoding for novel human respiratory antigens.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the vice in the ball that the ball the control of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc lung antigen polypeptides of the invention. Lung antigen polypeptides and ct their associated polynucleotides are useful in the diagnosis, treatment cc and prevention of various types of disorders in e.g. humans, mice, cc candition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable disorders cc include autoimmune diseases such as rheumatoid arthritis, chipperproliferative disorders such as rheumatoid arthritis, chipperproliferative disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular cc disorders such as cardiac arrest, cerebrovascular cc disorders such as cardiac arrest, cerebrovascular cc Alzheimer's disease, infections caused by bacteria, viruses and fungi, cc ocular disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as cromal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine phritis and cc respiratory disorders such as sthma and pleurisy. The polypeptides can cc also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in cc chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

CC Note: The sequence data for this patent did not form part of the printed cc specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the isolation of novel human respiratory antigens (AAU1765-AAU17975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), hung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAS27869-AAS28159 encode for novel human respiratory antigens. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences.

The invention relates to a polynucleotide having any of 6006 specific sequences (ABZ50888-ABZ56893), which are expressed by a fungus under specific culture conditions including one or more of eutrophic, oligotrophic, solid, early germination, alkaline, high temperature, low temperature or maltose culture or polynucleotides stringently hybridising to these sequences. The polynucleotides are useful for monitoring the

Pred. No.

is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with EST homology (covering
                                                                                                   (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Published Only in Database (2001)

'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence. The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OJ1060_D03 clone has an overlap with OJ1117_E01 clone(DDBJ: AP003747)at 5' end and an overlap with OJ1113_E01(DDBJ: AP005437) at 3' end. The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                almost the entire length of partial sequence) is classified as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="This category is n

on Sep 21, 2002 this sequence version replaced gi:21737824.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                              consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 9, 2003 this sequence version replaced gi:2326554.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sneed, A., Sodergren, E., Song, X.-Z., Sorelle, R., Sosa, J., Steinle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Taylor, T., Thomas, N., Thomas, S., Tingey, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, O., Wang, S., Warren, J., Warren, R., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Zhou, S., Yen, J., Yoon, L., Yoon, V., Yu, F., Zhang, J., Zhou, J., Zhou, X., Zhao, S., Dunn, D., Yon Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G. and Gibbs, R.A.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotunn sequence reads. Both end sequences and whole genome shotunn sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (21-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rat Genome Sequencing Consortium Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              submitted (09-JAN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 236062)
